

## CAROLYN JONES

*April 26, 2012*

I joined Monsanto's Electronic Special Products when we were still on Bubb Road. I left Monsanto in late 1975, to join Hewlett-Packard's Optoelectronic Division (OED), where I stayed until early retirement in 2002. During that period, OED became part of Agilent, and then was spun-off into LumiLeds (a joint venture with Philips).

During these 27 years, I continued to work with LEDs in various functional areas: R&D, Manufacturing, R&D, & Product Assurance. For the last 15 years I had responsibility for OED's Optical Measurements Laboratory. I was HP's "expert" in Colorimetry, and participated in setting LED standards through CORM, CIE and Energy-Star. I also hold a generic patent on a unique reflective optical design.

I met my husband, Frank Kenter, at HP. Frank was at General Instrument (1980-84), and so he also worked with and knows many of the Monsanto folks. We are now happily married for 30+ years, with one child (Franklin), born when I was 43. Franklin is now a happy graduate student in mathematics at UC San Diego.

In 2002, I was given a choice between early-retirement or no job. Retirement seemed a little early for me, so I went back to school to get a teaching credential. I taught science and math in local high schools for about 5 years, and am still continuing as a private tutor.

In retirement, I have concentrated on painting and rented a studio at the Redwood City Art Center. Painting is something I have always enjoyed and always wanted to do. In the last few years, I have attended painting workshops in France. In 2010, I returned from the High Alps of Provence with 59 oil paintings. In 2011, I was invited to join Portola Art Gallery at Allied Arts in Menlo Park. Recent paintings can be seen at [www.portolaartgallery.com](http://www.portolaartgallery.com). There is also an interesting article about me in "In Menlo": <http://inmenlo.com/2011/02/01/carolyn-jones-artistic-expression-fueled-by-a-scientistsunderstanding-of-color/>
